

Hybrid Extreme CMS

Hybrid Extreme - Central Monitoring Software (CMS)

An Extreme Multi-Site Monitoring, Video Evidence Retrieval and Video Management Software.

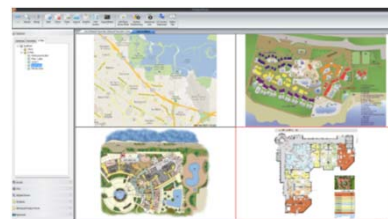

Multiple screen support and Mixed content

Users can arrange an unlimited number of different layouts, consisting of cameras, E-maps and POS. Individual viewing is able to switch between live mode, search mode, windowed, and full-screen viewing mode. Dual monitor displays are also supported.

Graphic Mapping for cameras from Extreme VMS Server

User can use same E-map that added at Extreme VMS server. Multiple maps can be shown in a view and cameras can be displayed to a channel window by simple drag-and-drop.

Exported video use as evidence

Images can be easily exported as JPEG or PNG files or printed as a report to use as court evidence. Video can be exported either as proprietary data to be used in a player or as an AVI file to play in any media player.

Unparalleled Access to Video

Authorized users can access cameras across the camera by camera access permit that set on Extreme VMS server. CMS, user interface for Hybrid Extreme VMS, delivers instant search during live monitoring, digital zoom, snapshot, PTZ control.

Live event monitoring

Motion events, or events incoming from external physical security systems like alarm input port, can be investigated in seconds.

Management to Extreme VMS server

The Extreme CMS Wizard can be used for adding cameras and user configurations remotely and can modify and apply Extreme Hybrid VMS server configurations.

Hybrid Extreme - Central Monitoring Software (CMS)

Features and Specifications
